**MAPLEWORKS TECHNOLOGY ANNOUNCES PAUL GASPARRO AS FEATURED
GUEST ON 'SOUNDBYTES' RADIO SHOW**

MapleWorks' Co-Founder Shares Industry Expertise

MapleWorks Technology (www.mapleworks.com), a leader in software development Onshore Outsourcing solutions and services for the voice, data & Video Convergence, network communications and Telecommunications industries, announces that Paul Gasparro, company co-founder and vice president of business development, was the featured guest on the March 15th, 2009 radio show, SoundBytes. SoundBytes is the longest-running computer radio show on the air and spotlights the world of computers and high technology. The show features reports on software, hardware, the Internet and related subject matter, and invites industry experts to speak on behalf of their respective markets and expertise areas.

Paul Gasparro educated the radio show audience not only about MapleWorks the Company, but why there is a growing need for Onshore Outsourcing in today's volatile economic client, as well as the myriad of benefits Onshore Outsourcing brings. MapleWorks' location in Canada overcomes the principal inhibitors to outsourcing, which have been identified as operational difficulties and perceived Intellectual Property (IP) security risks. On the operational side, geographical proximity, common time zones, and common development culture and language all significantly mitigate operational fears and risks. Canada has the same patent and trademark protection systems as in the U.S., and has the reputation of placing the same degree of respect that is expected in the U.S.

In addition, Mr. Gasparro enlightened the audience with examples of how MapleWorks Technology is paving the way with dynamic advancements and technologies in the data & Video Convergence, network communications and Telecommunications industries. For example, MapleWorks has had an opportunity to participate in the development and delivery of some very exciting products, such as the concept of the "Triple Play": cable, high speed internet access, and telephone services all from one provider. Cable and telephone service providers have targeted this market with great emphasis. Through this Telecommunications triple play approach, service providers try to secure dominance in the network communications market. MapleWorks has been a part of the development of software that enables the delivery of the Voice over IP (VoIP) telephone services as a part of the triple play, and the Company's software enables the service provider to provide the telephone features that consumers assume are standard: call forwarding, call waiting, 911, etc..

To learn more about Onshore Outsourcing, as well as MapleWorks' expertise in the data & Video Convergence, network communications and Telecommunications markets, listen to the SoundBytes podcast by clicking the following link: <http://www.mapleworks.com/in-the-news/>

About MapleWorks

MapleWorks Technology is a proven provider of software development services to network communications product suppliers, serving the telecom and enterprise markets. The Company delivers trustworthy on-shore engineering and design services with a deep-domain experienced team that is knowledgeable in commercializing technology in a cost-effective manner. MapleWorks is headquartered in the Ottawa Region known as Canada's Silicon Valley, providing solid IP protection for their customers. For more information visit www.mapleworks.com.
